

Sprinkler Guards/Shields

Sprinkler guards are designed to protect automatic sprinklers from mechanical damage in the event of a minor impact. They can be used on upright or pendent automatic sprinklers. Specific guards listed below for use with Early Suppression Fast Response (ESFR) automatic sprinklers are only intended for use under conveyors, mezzanines or other similar obstructions and are specifically not for use at ceiling level. Sprinkler shields are mounted directly to the sprinkler casting or may accompany the sprinkler guard to protect the thermal sensitive element from retarded operation due to water discharge from nearby sprinklers at higher elevations.

Sprinkler Guards/Shields (Class 2091)

V27

Company Name:	Victaulic Company
Company Address:	4901 Kesslersville Rd, Easton, Pennsylvania 18040, USA
